TIMELINE

November 8, 2022 - Ongoing

CONTRACTOR TYPE

Prime

RSS TEAM CONTRIBUTION

Supply various items such as drums, cutting blades, impeller bearings and other industrial equipment items to ensure on-site mission readiness requirements are met.

Project Overview

Each year, the Canal Corporation conducts dredging to maintain minimum water depths for navigation in the Cayuga Seneca, Champlain, Erie and Oswego Canals. Four floating plants, staffed with permanent and seasonal employees, are located on the Canal in Waterford, Utica, Syracuse, and Albion. Each floating plant has the capability to dredge by hydraulic and mechanical methods. Most dredging is conducted during the navigation season between May and November. The average yearly volume of sediment dredged is approximately 280,000 cubic yards.
